RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 22 pages. Original publisher: Portland, Or. : U. S. Dept. of Agriculture, Forest Service, Pacific Northwest Research Station, 1992 OCLC Number: (OCoLC)467216640 Subject: Elk -- Habitat -- Blue Mountains (Or. and Wash.) -- Computer programs. Excerpt: . . . Changing Defaults: The Options command changes HEI calculation default parameters associated with Forage, Roads, forage quantity and quality, open road miles, and map pixel size. Changes made to Pixel Size, default parameters are not saved and must be specified anew with each HEICALC and Display session. Selecting the Options command leads to a submenu of the default parameters, as described below. Forage parameters-The Forage command is used to specify the forage species, percentage of cover, and percentage of grass height remaining after October 1. Selecting the Forage command leads to a submenu of command choices to specify forage parameters for species, coverage, and height. The Species command allows the user to choose between bluebunch wheatgrass and Idaho fescue as the dominant (Agropyron spicatum) (Festuca idahoensis) grassland community species within the map analysis area. The default choice is bluebunch wheatgrass. The current species selection is always shown within parentheses at the end of the prompt. Pressing F or B will select either Idaho fescue or bluebunch wheatgrass as the grassland community type. Pressing Esc will return to the map display without changing the current species selection. The Coverage command prompts the user to input the percentage of herbaceous plant cover that is comprised of decreasers. The default is 20 percent, but valid input ranges from 1 to 100 percent. Entering 0 (zero) percent will return the program to the map display without changing the current coverage percentage. The Height command prompts the user...
