Reviews

Great electronic book and useful one. It can be writter in straightforward terms rather than difficult to understand. Once you begin to read the book, it is extremely difficult to leave it before concluding.

APPLICATIONS OF THE DIFFERENTIAL AND INTEGRAL CALCULUS TO THE GEOMETRY OF SURFACES AND SOLIDS OF REVOLUTION. We will commence the investigation of surfaces and solids by means of the application of the differential and integral calculus, with that which constitutes the simplest case, viz. a surface or solid generated by the revolution of a given plane curve about some given line in it, generally one of its axes, as the axis of revolution. We shall afterwards proceed to the more general views of the subject, which are obtained by considering curved surfaces as loci of three dimensions. THE SURFACE AND SOLID CONTENT OF THE CYLINDER, SPHERE, AND CONE. Lemma. An equilateral triangle being described about a circle, whose radius = a, let its altitude = h, side = c, Upon each of the sides let there be drawn perpendiculars from the centre; then, b = c. And by similar triangles, THE CYLINDER. SURFACE. In a right cylinder let b = radius of base, a = altitude. The equation of the side is, y = b dy = 0 consequently the general formula Int. Calc. 68. u=z f 2yV(dx2 + dy2) becomes, u= P2irbdx v u = 2vbx+C; which, integrating between x = 0...
