In sequence of topics, to follow the plan adopted in the authors Primary and Intermediate Arithmetics, that of recognizing the value of the various courses of study in use in different parts of the country. Whatever originality may be demanded and legitimately shown in the preparer tion of a text-book, an author is bound to recognize the consensus of opinion as to topics and sequence. For example, modern courses invariably suggest the repetition of the most important portions of arithmetic from time to time, but they favor a somewhat exhaustive treatment of each subject whenever it is under discussion. The extreme spiral system, in which no topic is ever thoroughly treated at one time, but each is repeated until the pupil wearies of it, is psychologically too unwarranted to be considered seriously. On the other hand, the old-time plan of presenting important chapters but once is equally unscientific. Between these extremes lies the mean of the modern courses of study. 2. In arrangement by grades, to recognize the prevailing courses of study in the country, and to outline the work usually covered in the seventh and eighth school years, the authors Intermediate Arithmetic having covered the work of the fifth and sixth years.
